Sizing

Motorcycle boots are a firmer fit to sneakers or work boots. For touring boots or urban shoes, you can usually order your regular shoe size. For off-road boots, in most cases you need to order one size larger than your sneakers or work boots. **To be sure, you can measure your total feet length against the boot's internal footbed measurement below, and your feet**

should be at least 3/4 inch (15-20mm) shorter than the internal footbed. This measurement gives you the correct toe clearance for safety and comfort.

95% of our customers receive the correct size first time, but if you find that you need to exchange, please DON'T PANIC, we will work quickly to exchange sizes for you. So feel confident to buy right now and you will be impressed with our boots, and our customer service!
